Top Skills

Working under Pressure

Project Planning

Pitching

Certifications

Building RAG Apps Using MongoDB

GirlCode 2025 Participant and 2nd Position

Taifa Teule Leadership Network

Hackathon Participant

ALX Software Engineering Certificate

Clency Christine

Lifelong Builder | Backend Developer - [Python|Django rest framework|Fastapi|Rest APIs, Android Developer - Kotlin, Jetpack Compose, Learning AI integration into my apps(Applied AI)
Nairobi County, Kenya

Summary

I'm obsessed with understanding intelligence how it emerges, how it learns, and how we can build systems that push the boundaries of what's possible. OpenAI's mission to ensure artificial general intelligence benefits all of humanity deeply resonates with me; I believe the most transformative breakthroughs will come from bold, principled exploration at the frontier.

My path into AI has been anything but conventional. With a foundation in software engineering and mathematics, I taught myself machine learning through relentless self-study—diving into PyTorch tutorials, implementing papers from scratch, and experimenting late into the night. What fuels me most is reading cutting-edge research: I regularly lose myself in MIT CSAIL papers, ArXiv preprints from leading minds like Ilya Sutskever, Yann LeCun, and Karol Hausner, and deep dives into works from DeepMind, Anthropic, and OpenAI. There's nothing more thrilling than dissecting a new architecture, understanding its theoretical underpinnings, and immediately prototyping it.

I've turned that curiosity into action through ambitious projects. As part of an all-women team, I co-built GKash, an AI-powered mobile app teaching saving and investing to underserved communities in Kenya—earning 2nd place in the 2025 Absa GirlCodeHack (a Pan-African women-in-tech competition) and acceptance into a competitive accelerator. I've developed backend systems for social impact platforms (e.g., GBV detection in workplaces using Slack integrations), built real-time fraud detection models, and contributed to community-driven tools like Tech-Pro Konnect and ProcureGuard AI. These experiences honed my ability to rapidly prototype, iterate, and ship complex systems independently.

I'm extremely comfortable with advanced mathematics—linear algebra, probability, statistics, and calculus—and proficient in Python.

Experience

GDG On Campus JKUAT

Google Developer Group on Campus organizer JKUAT

September 2025 - Present (5 months)

Organizing events, sessions and partnerships for the gdg developer community at JKUAT.

Tech For Nonprofits

Django Backend Developer (Volunteer)

June 2025 - Present (8 months)

Build and maintain scalable REST APIs using Django & Django REST Framework

- Design and optimize database models and queries (PostgreSQL)
- Implement authentication, authorization, and security best practices
- Integrate backend with frontend systems and third-party services
- Write clean, testable, production-ready code; participate in code reviews
- Collaborate with frontend devs, product managers, and stakeholders for feature delivery

TechiPro Konnect App

Co-Founder

June 2024 - Present (1 year 8 months)

Nairobi County, Kenya

This is an android developer role.

HakiChain

Software Developer

June 2025 - November 2025 (6 months)

Education

Jomo Kenyatta University of Agriculture and Technology (JKUAT)

Bachelor's degree, Mathematics and Computer Science · (2023 - 2027)

ALX software engineering programme
Software Engineering · (2023 - 2024)

eMobilis Mobile Technology Institute
· (January 2023 - May 2023)
